FEATURES

Ariel's largest compressor frames, the KBB and KBV are rated up to 10,000 bhp. Each compressor features a modern, durable design with a strengthened internal structure. This family of frames is recommended for use in pipeline transmission and high pressure injection applications.

Rigid Conrod With Bronze Bushing

Application-Specifc Efficient Valves

Rugged One-Piece Crosshead

Ariel "Necked-Down" Piston Rod Design

Precision Bearing Shells:

Every Ariel compressor features precision-machined tri-metal M frame-driven lube oil pump provides cooled oil through a full-flow oil filter to all moving parts in the frame. A divider-

Versatile Unloading Devices:

Ariel offers manual, head-end variable volume clearance pockets on most cylinders. Pneumatic suction valve un-loaders are available on a limited basis.

Efficient Valving:

Plate-type valves are designed for modern speeds, utilizing non-metallic sealing elements as standard. Valves are selected to comply with established low-valve velocity standards.

Heavy-Duty Crankshafts:

The KBB/KBV compressors feature forged steel, precisionmachined crankshafts with integral counter-weights manufactured by Ariel Corporation.

High-Efficiency Canister Type Oil Filters:

Ariel KBB/KBV compressors feature high-efficiency canister filters rated at 1 micron nominal and 12 micron absolute.

Rugged Crankcases:

Ariel crankcases are designed for long service life and ease of access during maintenance. Our crankcases feature a heavilyribbed, high-strength, cast iron base with a removable lightweight aluminum top cover.

Full Pressure Lubrication:

A frame-driven lube oil pump provides cooled oil through a full-flow oil filter to all moving parts in the frame. A dividerblock system supplies metered oil to cylinder bores and rod packings.

High-Strength Bolting:

Durable Grade 8 bolting on all loaded joints combined with specially designed fatigue-fighting bolts on all valve caps ensure ultimate holding strength.

Rigid Connecting Rods:

The KBB/KBV compressors feature durable connecting rods manufactured from ductile iron with 4 bolts and a heavy-duty "I" section.

Rugged Crossheads:

One-piece, long-life crossheads with hardened, ground steel crosshead pins and direct, full-pressure lubrication at the top and bottom for minimum wear.

Innovative Cylinders:

Ariel's single and double-acting non-cooled cylinders eliminate the cost and maintenance associated with water cooling.

Durable Pistons and Rods:

KBB/KBV compressors feature wear-resistant ductile or gray iron pistons and precision-ground alloy steel piston rods with locking crosshead nuts. Rolled threads are 1/4" under rod diameter for easy installation.
